

Women's Health Program Overview

Patient Guide

Women's Health Program · KORB Health Group · For Patient Reference

This guide is for educational reference only. It is not medical advice. Your KORB provider determines which treatment is right for you. If you have questions, contact KORB by phone or email (see contact information below).

What Is the Women's Health Program

KORB's Women's Health Program treats the symptoms of perimenopause, menopause, and the years after. Treatment is hormone therapy, matched to your symptoms and your health history, and prescribed by a licensed KORB provider.

Most women come to us for hot flashes, night sweats, disrupted sleep, mood changes, vaginal dryness or painful intercourse, low libido, or the mental fog that often comes with this stage. You do not need to have all of them, and you do not need to wait until they are severe.

The Three Stages

Stage	What it means
Perimenopause	Hormones fluctuate and periods become irregular. Symptoms often start here.
Menopause	Twelve months without a period.
Postmenopause	The years afterward, when lower hormone levels affect bone and heart health.

What You May Be Prescribed

Your provider chooses from three hormones, alone or in combination.

Hormone	What it does	How it comes
Estradiol	The main treatment for hot flashes, night sweats, sleep, and vaginal dryness	Skin patch or cream
Progesterone	Protects the uterus when you take estrogen. Also helps sleep and mood	Capsule taken at night
Testosterone	Supports libido, energy, mood, and muscle strength	Cream

If you still have your uterus, you will always be prescribed progesterone alongside estrogen. This is not optional and it is not an upsell. Estrogen on its own thickens the lining of the uterus over time, which raises cancer risk. Progesterone prevents that.

Timing Matters

Hormone therapy works best and carries the least risk when it is started under age 60 and within about ten years of your last period. That does not mean it is unavailable outside that window, but your provider will weigh it differently and will talk it through with you.

How Your Treatment Is Adjusted

This program is guided by how you feel, not by a lab number. There is no blood test that tells us the right dose for you. Your provider adjusts based on which symptoms have improved, which have not, and whether you are having side effects. That makes what you report at each visit the most important information we have.

Optional at-home hormone testing is available if you want it. It is not required, and results are not used to set your dose.

Give any change several weeks before judging it. Hormones do not shift overnight.

Pricing

For current Women's Health pricing, contact KORB Operations or ask your provider at your visit.

How Your Program Works

- Your first visit covers your symptoms, your history, and whether hormone therapy is a safe fit for you.
- Your provider selects your hormones and starting doses, and your prescription ships to you.
- Follow-up is quarterly, or sooner if your symptoms are not controlled.
- At each visit your provider adjusts based on what has changed for you.
- If you have insurance you would like to use, ask. Some products are available at your local pharmacy, though creams and testosterone are not.

Also Available

Sexual health, hair loss, and skin care treatments can be added alongside your hormone therapy. Ask your provider if any of these are of interest.

When to Contact KORB and When to Seek Emergency Care

Contact KORB Operations	Patient Portal — Message Your Provider	Seek Emergency Care Immediately
Questions about timing, storage, or administration Email: info@korbhealth.com Phone: +1 (888) 959-7299 Hours: Mon–Fri, 9 AM–6 PM CT	- Mild but persistent side effects - Questions about whether to continue therapy - Questions about your dose or symptoms	- Trouble breathing or throat / face swelling - Severe rash or widespread hives - Chest pain or fainting - Severe or rapidly worsening symptoms - Confusion or severe weakness - Any symptom that feels urgent or unsafe

The Patient Portal is your only HIPAA-compliant way to message your provider directly — providers check portal messages once per day on clinic days. Phone and email are not appropriate for emergencies. When in doubt, go to urgent care or the emergency room.

Key Reminders

- If you have a uterus, progesterone is required alongside estrogen. Do not skip it.
- Your dose is guided by your symptoms, so tell your provider what has and has not improved.
- Give changes several weeks before deciding they are not working.
- Never share hormone medication with anyone.
- Tell your provider about any new diagnosis, new medication, or unexpected vaginal bleeding.
