

Men's Health Program Overview

Patient Guide

Men's Health Program · KORB Health Group · For Patient Reference

This guide is for educational reference only. It is not medical advice. Your KORB provider determines which treatment and dose are right for you. If you have questions, contact KORB by phone or email (see contact information below).

What Is the Men's Health Program

KORB's Men's Health Program is built around how you actually feel. The main program is **Testosterone Replacement Therapy** for men with lab-confirmed low testosterone and symptoms that go with it. Two optional add-ons are available alongside it: **KORB Rise** for sexual health and a **Hair Loss** treatment.

Everything is prescribed by a licensed KORB provider, dispensed by a licensed U.S. pharmacy, and shipped to your door.

Testosterone Replacement Therapy

Testosterone naturally declines with age. When levels fall low enough to cause symptoms, replacing it can help. Common reasons men start include ongoing fatigue, reduced strength or muscle mass, increased body fat, low sex drive, low mood or motivation, and poor recovery from exercise.

What it is	How it's given	Labs	Follow-up
Testosterone cypionate, a long-acting injectable form of testosterone	A small injection you give yourself at home, either under the skin or into the muscle	Required before starting and at every follow-up	Every 12 weeks, or sooner if your provider recommends it

Testosterone is currently available to KORB patients in Texas and California only. If you live elsewhere, ask your provider about other options that may fit your goals.

Labs are not optional. Testosterone affects your red blood cell count, your prostate, and your hormone balance, and those changes are not always something you can feel. Regular lab work is how your provider keeps your dose in the right range and catches problems early. Your program includes baseline labs before you start and repeat labs at each follow-up.

Add-On: KORB Rise

KORB Rise is a dissolvable troche for erectile dysfunction. It contains the same active ingredients found in Viagra and Cialis, combined with L-Arginine and oxytocin. It starts working in about 30 minutes and can last up to 36 hours, so it does not have to be planned around tightly.

Do not take KORB Rise if you take nitrates for chest pain. The combination can cause a sudden, dangerous drop in blood pressure that can be life-threatening. Tell your provider about every medication you take, including ones you take only occasionally.

No lab work is required. When you need a refill, message us through the patient portal.

Add-On: Hair Loss

Prescription treatment to slow further loss and support regrowth, available as a once-daily pill, a once-daily topical, or both. Most men see visible change in three to six months, so give it time before judging whether it is working.

Looking for More Than Hormone Support?

If your goals lean toward recovery, body composition, or longer-term health optimization rather than hormone replacement, ask your provider about the **Functional Health & Longevity Program**. It uses a different set of therapies aimed at those goals.

You can be enrolled in more than one KORB program at the same time. Many patients combine Men's Health with Functional Health & Longevity, or with the Weight Loss Program. Your provider will make sure the combination is appropriate and that nothing conflicts.

Pricing

For current Men's Health pricing, contact KORB Operations or ask your provider at your visit.

How Your Program Works

- Your first visit covers your symptoms, health history, and whether treatment is a safe fit.
- Baseline labs are drawn before you start.
- Once your provider reviews your results, they confirm your treatment and starting dose, and your medication ships to you.
- You follow up roughly every 12 weeks. Labs are drawn about two weeks before each visit so results are ready.
- Your provider adjusts your dose based on those labs and how you are feeling. Dose changes are gradual and always provider-directed.

When to Contact KORB and When to Seek Emergency Care

Contact KORB Operations	Patient Portal — Message Your Provider	Seek Emergency Care Immediately
Questions about timing, storage, or administration Email: info@korbhealth.com Phone: +1 (888) 959-7299 Hours: Mon–Fri, 9 AM–6 PM CT	- Mild but persistent side effects - Questions about whether to continue therapy - Questions about your dose, labs, or refill timing	- Trouble breathing or throat / face swelling - Severe rash or widespread hives - Chest pain or fainting - Severe or rapidly worsening symptoms - Confusion or severe weakness - Any symptom that feels urgent or unsafe

The Patient Portal is your only HIPAA-compliant way to message your provider directly — providers check portal messages once per day on clinic days. Phone and email are not appropriate for emergencies. When in doubt, go to urgent care or the emergency room.

Key Reminders

- Testosterone requires lab work before starting and at every follow-up. This is a safety requirement, not a formality.
- Never change your dose, schedule, or injection route without talking to your provider first.
- Testosterone is available through KORB in Texas and California only.
- Do not take KORB Rise if you take nitrates for chest pain.
- Hair loss treatment takes three to six months to show results.
- Contact KORB Operations for scheduling and shipping questions, or your provider through the patient portal for medical questions.
